

Lehrbuch Der Differential- Und Integralrechnung (2)

Filesize: 5.8 MB

Reviews

An exceptional book as well as the font applied was fascinating to learn. It is loaded with knowledge and wisdom I am just easily can get a pleasure of studying a created book.
(Dr. Benjamin Lakin)

LEHRBUCH DER DIFFERENTIAL- UND INTEGRALRECHNUNG (2)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 218 pages. Original publisher: Washington, DC : United States Nuclear Regulatory Commission, Office of Nuclear Regulatory Research, 2011 OCLC Number: (OCoLC)741363396 Subject: Radioactive pollution of soils -- Models. Excerpt: . . . prevailing flow and transport processes. Biophysical monitoring of the research area allowed delineation of relatively large structural units in the soil cover that provided distinctly different conditions for plant growth. The size of those units exceeded the scale of investigation in this work. Borehole log data and laboratory hydraulic measurements both confirmed the potential for subsurface preferential solute transport, while at the same time indicating that an exact definition of a representative elementary volume for the subsurface may be difficult, if at all possible. Measurements of the water content and pressure head produced information about the hydraulic properties of the unsaturated soils. Field water retention was well defined using these measurements. This suggests that the Richards model did provide an appropriate conceptualization of the prevailing flow processes at the field site. Two field experimental studies, both of original design, were carried out and analyzed using model abstraction. One study, referred as the solute flux experiment, was meant to imitate a soil column experiment at the plot scale. The experiment involved the application of a conservative tracer around a well and subsequent irrigation with simultaneous pumping of ground water. This experiment should provide insight into the significance of zones in the soils having a high vertical conductivity. A second study was designed to observe the lateral transport of a surface-applied conservative tracer pulse when transport was controlled by regular irrigation pulses and natural precipitation. This second experiment should demonstrate the effect of the topography and continuity of the restrictive layer, as well as the significance of funnel...
