What was attempted. An attempt was made to measure the vapor pressure of certain hydrated salts at several points over a considerable range of temperature in order to study the phenomenon as a function of the temperature. 2. What were the methods? (a) Special emphasis was placed upon the construction of a thermostat to operate at the higher temperatures. (b) Improvements in the technique in the use of the tensimeter were employed. (c) Equilibrium was approached from higher and lower pressures. 3. In how far were the attempts successful? Considerable data has been obtained on six hydrates, and on the saturated solution of some of them above the transition point. The experimental errors usually encountered in determining vapor pressures have been practically eliminated. 4. What contributions actually new to the science of chemistry have been made? (a) The collection of complete vapor pressure data for several hydrates and saturated solutions has been accomplished. (b) Certain new transition points have been located by this method: $\text{CoSO}_4 \cdot 7\text{H}_2\text{O} - 6\text{H}_2\text{O}$ at 45.1°C $\text{CdSO}_4 \cdot \frac{8}{3}\text{H}_2\text{O} - 1\text{H}_2\text{O}$ at 41.5°C . The transition point of $\text{MgSO}_4 \cdot 7\text{H}_2\text{O} - 6\text{H}_2\text{O}$ at 48.4°C previously found by Van der Heide between 48 and 48.5°C has been verified. (c) It has been shown that the vapor pressures of the hydrates and saturated solutions investigated may be expressed as a continuous function of $\log p$ and $1/l$, in the same manner as the vapor pressure of water and of solutions...
